

ASPERA Workshop

The next generation projects in Deep Underground Laboratories:

Towards common strategy and linking schemes

Zaragoza & Canfranc, Spain

June 30 – July 2, 2011

The European Roadmap on Astroparticle Physics, released by ASPERA-ApPEC, covers the future large scale projects in the next decade, emphasising the need for strengthening the coordination of activities at European or even international levels.

The Workshop is organised on the deep underground laboratories projects, focusing on the following topics:

- ✦ Properties of neutrinos
- ✦ Dark matter search
- ✦ Stability of protons

The relevant ongoing and especially forthcoming projects in the largest worldwide underground laboratories will be presented and discussed, in view of pinning down key points allowing to evolving towards a common strategy and relevant linking schemes.

The programme will comprise a series of invited plenary talks, a round table session and a visit to the Canfranc underground lab.
