

Message d'annonce du décès de Bernard

Dear Colleagues

This is with great sadness that I inform you that Bernard Aune passed away on Thursday 29 September 2011. I have been informed yesterday by his son, Stephan Aune, who works at CEA-Saclay in the Detector Division.

Bernard started the SRF activity at CEA-Saclay in the late 80's, and led it until his retirement in 2002. He became our Accelerator Division leader during the construction of MACSE and the preparation of the TTF injector construction and TTF design.

He also became TTF-TESLA spoke-person at DESY for several years and then returned to Saclay to lead the Accelerator Division again.

Bernard was definitely our main source of inspiration and our main leader in the SRF developments at Saclay, leading to our implication in the construction of major accelerator projects.

He will be remembered by all our colleagues from the TTF construction and operation times as an outstanding scientist and a friend.

Bernard was one of the brightest person I met in my career.

With my best regards

Olivier Napoly
