

Concluding remarks

Pleasant meeting: 2 days,

Good atmosphere

Difficult problem due to the complexity of the physics and also the accuracy one needs

very exciting with even totally new results

3D calculations of reversal polarity of the Sun

New solar spectrum,

New prediction of the Maunder minimum irradiance change

New climatic models taking into account UV variability

probably others...

MAGNETISM is a common language between us

- **An interesting community**
 - Proper proportion of young and experts scientists
 - This is important because the challenges are high 3D simulations, a lot of physical phenomena, which ones are the dominant ones
- **An assembly coming from different fields**
- **The interaction will exist now around PICARD and justify to be known**
- **Putting the presentations on a website.**
- **Publications? SPACE CLIMATE (every 2 years)
2009**
